[\*] In order to restore the original firmware you have to install a file named V1.34-3.00-6.6.09-root.txt to the /boot/firmware directory [\*] If you have problems when you try to restore the firmware. Please copy the above V1.34-3.00-6.6.09-root.txt file to /boot/firmware directory. Before restore the backup battery, reset the battery using the "Data out" button. If this error does not occur, change the battery. To confirm that the information is correct, please enter the following commands in the command prompt. [\*] Host channel number of this device is 6 [\*] Power supply voltage is 2.1V (9v) [\*] Switch is on (don't forget to switch the power supply ON again when you power off to BIOS setup screen) I've got a strange message when booting. it says "press delete to continue. i press the delete key, nothing happens, the dvd drive goes to standby and never turns on again. it's an acer travelmate 2540. i was using the driver on a windows 98 machine. i changed to a windows 2000 machine, same problem. i tried using the driver from an hp 98 to make sure the os was right. i downloaded the driver and used that, but still same problem. i downloaded a win98 driver and used that also. but same problem. i checked the cpy error logs and it says it can't boot. i tried all 3 options in the first post to make sure i wasn't using the wrong one. I tried downloading the files and running the installer and nothing. I've installed this on a windows 98se system. I loaded up the drivers, changed the boot order, and get the message "press delete to continue". I press delete, nothing happens, the dvd drive goes to standby and never turns on again. It is an acer travelmate 2540. I tried using the drivers from an HP 98 to make sure the os was right. I downloaded the driver and used that, but still same problem. I tried downloading the drivers and using the acpi driver loader to make sure that i wasn't using the wrong one. The acpi driver loader is as follows: i went back into boot order to remove the acpi driver, tried again. the same thing happened. i then went back in and loaded the acpi\_82157476af
